(a) Criterion 1: Utility Robustness Radius $\hat{\kappa}_u$
Robustness radius $\hat{\kappa}_u$ of B over P (\%)
Criterion 1: $\hat{\kappa}_u$ (SCE on $\mathcal{A}_\kappa$)
Asymptotic limit (50%)
Risk aversion of Member 2 (γ_2, log scale)
(b) Utility Breakdown vs. Money-Metric Stability
Welfare change of P vs. M (\% of W_t)
Criterion 3a: $\Delta\Xi_0(P)$ ($\rho = 0$)
Criterion 3a: $\Delta\Xi_\infty(P)$ ($\rho \to \infty$)
Criteria 1--2: $\Delta SCE^P_{\alpha^*}$ (utility)
Risk aversion of Member 2 (γ_2, log scale)
